Researchers Name(s):	Sizhe Yuen		
Project Title:	Player Prediction in DOTA		
School/Unit: (Please indicate)	Computer Science	Supervisor:	John Thomson
Emails	sy35@st-andrews.ac.uk	Date Submitted	1 October 2018

Project Description: Please give a concise description without technical terminology of **what** you are proposing to do; **Who** your participants are (eg. age, vulnerability, nationality, organisation); **Where** the research will take place (eg. site, country); **How** you are doing it, (eg. survey, interview). (90 words for database reasons)
This summary will be reviewed by UTREC and may be published as part of its reporting procedures.

This project aims to predict players in the video game Dota 2 by analysing replays of players and running the data through a machine learning model. The purpose is to detect players using accounts for illegitimate reasons such as account selling. Publicly available data from Dota 2 players will be collected from the internet and processed. The research will be done in St Andrews and no interaction between the researcher and the players will take place.

Ethical Considerations: You should give an overview of the important ethical issues raised by your research including **how** you will obtain voluntary informed consent (especially where you are gathering audio/video data); **What** type of data you will be collecting (anonymous, coded, attributable); **How** you will handle, store and retain/destroy data. (90 words for database reasons) You should elaborate on these issues in Q28.
This summary will be reviewed by UTREC and may be published as part of its reporting procedures.

The replay data will be obtained from an open source project's API (<https://www.opendota.com/>). This replay data is publicly available as part of the game. The data contains identifiable account names of the players on an opt-in basis. Players can choose to consent to third parties accessing their match history via an in-game option which is disabled by default. Players who do not consent appear as anonymous in the replay data. There is no link between the identifiable account names and real world ids.

APPLICATIONS MUST BE SUBMITTED TO THE RELEVANT SCHOOL ETHICS COMMITTEE
[HTTPS://WWW.ST-ANDREWS.AC.UK/UTREC/SEC/SECMEMBERS/](https://www.st-andrews.ac.uk/utrec/sec/secmembers/) PLEASE DO NOT SUBMIT DIRECTLY TO UTREC.

ETHICAL STATEMENT

28. Please provide a clear, concise statement of the ethical issues raised by this project and provide details of how you will address these issues, paying particular attention to those questions which have specifically asked for clarification in Q28. This section should also provide full details of what type of data you will be collecting (anonymous, coded, attributable) and how you will handle/store and retain/destroy data.

The replay data will be obtained from an open source project's API (<https://www.opendota.com/>). For every game of Dota 2 that is played, a replay file of the game is created and available publicly through the official API by Valve Software, the creators of the game. OpenDota is an open source project that parses replays in order to provide useful statistics to players to help improve their performance. The project also provides an API to download replays which contains additional statistics parsed from the replay.

The data contains identifiable account names and ids of the players on an opt-in basis. Players can choose to consent to third parties accessing their match history via an in-game option which is disabled by default. Players who do not consent appear as anonymous in the replay data. There is no link between the identifiable account names and real world names and ids.

The data gathered will only be presented in the project report and no personal data will be collected, stored or disseminated.
